Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Water-Based Blocked Polyurethane Curing Agent competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Water-Based Blocked Polyurethane Curing Agent production reached approximately 7454 tons, with an average global market price of around US\$ 14700 per ton. Waterborne blocked polyurethane curing agents are a type of polyurethane crosslinker that uses water as a dispersion medium and undergoes a special blocking treatment. Their core feature is that the blocking agent temporarily inactivates the active –NCO groups in traditional isocyanate curing agents, resulting in stability in ambient temperature water-based systems and preventing premature reaction. This significantly reduces the toxicity risk of free –NCO groups and improves storage and transportation safety. During application, these curing agents typically require heating or other deblocking conditions to release the active –NCO groups, which react with hydroxyl and amino groups in the waterborne resin to form a dense polyurethane crosslinking network, imparting excellent abrasion resistance, chemical resistance, washability, and bond strength to coatings, films, or fabrics.

The global Water-Based Blocked Polyurethane Curing Agent market size was estimated at USD 110.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.80% during the forecast period.
