Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Water-Based Hydroxy Acrylic Emulsion competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Water-Based Hydroxy Acrylic Emulsion production reached approximately 10.8k tons, with an average global market price of around US\$ 3500 per ton. Waterborne hydroxylated acrylic emulsions are a type of high-molecular-weight emulsion made primarily from acrylic monomers (such as acrylates and methacrylates) through an emulsion polymerization process. Reactive hydroxyl groups are incorporated into the polymer chain. Because water is the dispersion medium, these products are characterized by low VOC (volatile organic compound) emissions, environmental friendliness, and safety. The hydroxyl groups impart excellent reactivity, allowing them to crosslink with polyisocyanates, amino resins, blocked isocyanates, and other agents to form a dense three-dimensional network structure, significantly enhancing the chemical resistance, weather resistance, and mechanical properties of the resulting paint film.

The global Water-Based Hydroxy Acrylic Emulsion market size was estimated at USD 378.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
