### Report Overview

Water-based special matting powder is a coating additive that is mainly used in water-based coatings to reduce the gloss of the coating film and increase the wear resistance and scratch resistance of the coating film. The principle of water-based special matting powder is to add a certain amount of ultra-fine particles, such as silica, alumina, etc., to form tiny unevenness on the surface of the coating film, thereby scattering the incident light, reducing the reflectivity, and achieving the matting effect. The difference between water-based matting powder and oil-based matting powder is that the particle surface of water-based matting powder has been specially treated to make it have good compatibility and dispersion with water-based resin, and will not affect the stability and leveling of the paint.

The global Water Based Special Matting Powder market size was estimated at USD 450.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
