Abstracts

Water-based VCI aerosol refers to a volatile corrosion inhibitor (VCI) formulation delivered via aerosol spray that utilizes water as the primary solvent or carrier rather than traditional petroleum-based solvents or propellants. These products create a protective molecular layer on metal surfaces that prevents oxidation and corrosion by neutralizing environmental factors such as moisture and oxygen, and the water-based nature of these aerosols offers advantages in terms of reduced flammability, lower VOC (volatile organic compound) emissions, improved workplace safety, and alignment with increasingly stringent environmental regulations. They are widely used in industries such as automotive, aerospace, electronics, metalworking, and storage applications where temporary or long-term corrosion protection is required during manufacturing, shipping, or storage of metal components and finished goods.

The global Water Based Vci Aerosol market size was estimated at USD 125.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
