Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Water Bath Cooling Conveyor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global annual sales of water bath cooling conveyors (WFCs) were expected to reach approximately 16,500 units, with an average selling price of \$18,400 per unit. These continuous conveying devices use water to cool high-temperature materials or parts inline. They are widely used in casting, forging, heat treatment, plastic extrusion, and glass processing. Typically consisting of heat-resistant stainless steel chains or mesh belts, an enclosed water trough, a spray system, a cooling circulation pump, and a drainage filter, they achieve efficient heat exchange during material conveying, rapidly reducing workpiece surface and internal temperatures and preventing subsequent deformation, cracking, or defects caused by overheating. Typical applications include post-forging cooling of automotive parts, slow cooling of die-cast aluminum parts after exiting the furnace, and cooling and forming plastic extruded strips. The devices can be configured with different water temperatures and flow rates according to temperature zones, and some models also feature enclosed steam collection and waste heat recovery. As a critical slow cooling section in hot processing lines, water bath cooling conveyors help improve process stability, save space, and enhance product consistency and yield.

The global Water Bath Cooling Conveyor market size was estimated at USD 304.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
