Abstracts

Water borne latex paints are environmentally friendly coating solutions that utilize water as the primary solvent, as opposed to traditional solvent-based paints which rely on volatile organic compounds (VOCs). These paints consist of synthetic polymers, such as acrylic, vinyl, or styrene-acrylic, suspended in water, forming an emulsion that dries through water evaporation and coalescence of polymer particles. They are characterized by low odor, ease of application, quick drying times, and minimal health hazards, making them suitable for both interior and exterior applications in residential, commercial, and industrial settings. The formulation allows for excellent adhesion, durability, and resistance to fading, while complying with stringent environmental regulations aimed at reducing VOC emissions.

The global Water Borne Latex Paints market size was estimated at USD 52075.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
