Abstracts

Water cooled air compressors are industrial machines that use a water-based cooling system to dissipate heat generated during the compression process, making them particularly suitable for high-duty, continuous-operation applications where consistent temperature control is critical to maintaining efficiency, reliability, and extended equipment lifespan. These systems are favored in sectors with high ambient temperatures or space constraints, as water cooling offers superior heat exchange capabilities compared to air cooling, though they require access to a water supply and involve more complex installation and maintenance due to plumbing, water treatment, and potential corrosion management.

The global Water Cooled Air Compressor market size was estimated at USD 1150.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
