Abstracts

Water cooled heat exchangers are thermal management devices that transfer heat from a process fluid to a cooling water stream, leveraging the high heat capacity and thermal conductivity of water to achieve efficient temperature regulation in industrial, commercial, and HVAC applications; they typically consist of a shell-and-tube, plate-and-frame, or other configuration where one fluid flows through tubes while water circulates around them, facilitating heat exchange through conductive and convective mechanisms, and are valued for their ability to handle high heat loads, maintain stable operating temperatures, and operate in environments where air cooling is insufficient due to space constraints, ambient conditions, or efficiency requirements.

The global Water Cooled Heat Exchangers market size was estimated at USD 1230.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
