Abstracts

Water Cooled Hole Saw is a saw blade of annular (ring) shape, whose annular kerf creates a hole in the workpiece without having to cut up the core material. It is used in a drill. Hole saws typically have a pilot drill bit (arbor) at their center to keep the saw teeth from walking. The fact that a hole saw creates the hole without needing to cut up the core often makes it preferable to twist drills or spade drills for relatively large holes (especially those larger than 25 millimetres (1.0 inch)). The same hole can be made faster and using less power. The water cooled hole saw's capacity to cut a variety of hole diameters gives it an advantage over twist drills, further augmenting the market growth. Furthermore, an increase in the need for building activities involving hole cutting is likely to drive the worldwide water cooled hole saw market. Some of the primary growth drivers of the water cooled hole saw industry include increased infrastructure construction. Manufacturers and suppliers in the water cooled hole saw sector has significantly benefited from the advent of the e-commerce business. This is expected to provide excellent growth possibilities for the water cooled hole saw industry soon.

The global Water Cooled Hole Saw market size was estimated at USD 220.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
