Abstracts

A water cooled screw chiller is a type of refrigeration system used primarily in commercial, industrial, and large-scale HVAC applications to provide cooling for buildings, manufacturing processes, or data centers. It operates using a screw compressor, which compresses refrigerant gas, and transfers heat through a water-cooled condenser, where water absorbs and dissipates the heat, typically via a cooling tower. These systems are valued for their energy efficiency, reliability, and ability to handle high cooling loads, making them suitable for environments requiring consistent and substantial cooling capacity, such as hospitals, factories, and high-rise office buildings.

The global Water Cooled Screw Chiller market size was estimated at USD 2560.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.75% during the forecast period.
