Abstracts

Water cooled welding torches are specialized welding tools that utilize a continuous flow of coolant—typically water or a water-glycol mixture—through internal channels to dissipate the intense heat generated during high-amperage welding processes, enabling extended operation at higher power levels without overheating, reducing operator fatigue, and prolonging the lifespan of consumable components such as nozzles and electrodes. These torches are essential in industrial applications involving heavy-duty welding, such as shipbuilding, pipeline construction, and manufacturing of large structural components, where air-cooled alternatives would be insufficient for managing thermal load. The design often includes separate hoses for coolant inflow and return, integrated into a closed-loop system connected to a cooling unit, ensuring efficient heat exchange and maintaining consistent welding performance under demanding conditions.

The global Water Cooled Welding Torch market size was estimated at USD 350.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
