Abstracts

The water cooling pelletizing system is a critical equipment used for pelletizing polymer materials such as plastics and rubber. It operates by rapidly cooling molten material with water and cutting it into uniform pellets. The system typically consists of an extruder, die head, water cooling tank, pelletizer, and dewatering dryer. The molten plastic or rubber is extruded through the die to form strands, which are then quickly cooled and solidified in the water bath before being cut into pellets by rotating blades. The key advantage of this system is its efficient cooling capability, making it suitable for heat-sensitive materials to prevent thermal degradation while ensuring consistent pellet shape and size. It is widely used in plastic recycling, modified plastics, and engineering plastics industries, serving as a core component in plastic pelletizing processes.

The global Water Cooling Pelletizing System market size was estimated at USD 1374.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
