Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Water Filtration System Media competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Water Filtration System Media refers to the materials used to remove impurities and harmful substances in the water during the filtration process. Common ones include mechanical filtration media (such as filter cotton, brushes, sponges, used to intercept suspended particles), biological filtration media (such as ceramic rings, biochemical balls, bacterial houses, used to cultivate nitrifying bacteria to decompose harmful substances such as ammonia nitrogen), and chemical filtration media (such as activated carbon, zeolite, resin, used to adsorb odors and soluble pollutants). Different types of filters are usually used in layers with multiple media to achieve comprehensive purification effects at the physical, chemical and biological levels. With the enhancement of water ecological environmental awareness and the development of fish farming technology, the trend of fish pond filter media is evolving towards high efficiency, environmental protection and multifunctionality. New filter materials such as high-porosity ceramics, bioactive filter materials and nanomaterials are gradually being used in the market. They not only improve filtration efficiency, but also better promote the reproduction of beneficial bacteria. At the same time, intelligent filtration systems are also on the rise. Functions such as automatic backwashing, filter material replacement reminders, and linkage with water quality monitoring systems are gradually becoming popular, making fish pond filtration more accurate, convenient and sustainable.

The global Water Filtration System Media market size was estimated at USD 120.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of
