Abstracts

Water fire extinguishers are portable fire suppression devices that utilize water as the primary extinguishing agent, operating by cooling the fuel and reducing the temperature below the ignition point to effectively combat Class A fires involving ordinary combustible materials such as wood, paper, cloth, and some plastics. They are typically pressurized with air or nitrogen and may contain additives to improve performance, such as wetting agents to enhance water penetration or antifreeze for use in colder environments. The design often includes a durable cylinder, a discharge nozzle, and a pressure gauge, with variations available in stored-pressure or cartridge-operated models to suit different applications.
