## Abstracts

Water Jet Cutting Services, also known as waterjet machining, utilize high - pressure streams of water (often mixed with abrasives) to cut through various materials with precision. Unlike laser or plasma cutting, waterjet cutting is a cold process, avoiding heat - induced material distortion or thermal damage. A pump generates water pressure up to 400?600 MPa (58,000?87,000 psi), which is forced through a small nozzle (typically 0.1?0.8 mm in diameter) to form a high - velocity jet. For harder materials, abrasives (like garnet, aluminum oxide) are added to the water stream, acting as cutting particles.

The global Water Jet Cutting Services market size was estimated at USD 1265.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
