## Abstracts

Water Jet Guided Laser Technology is an advanced cutting and machining process that combines a laser beam with a thin, high-pressure water jet to enhance precision and efficiency. In this technology, the laser beam is transmitted through the water jet, which guides and cools the laser, allowing it to cut through materials with minimal heat-affected zones. This results in cleaner, more precise cuts and reduces thermal damage to the material being processed. Water jet guided lasers are particularly useful for cutting intricate shapes and delicate materials that might be damaged by traditional laser cutting. They are widely used in industries such as aerospace, electronics, and medical device manufacturing, where high precision and minimal material distortion are critical. About 80 units are sold each year, with an average price of US\$1.25 million per unit. Water Jet Guided Laser (WJGL) technology has carved out a strong position in ultra-precision materials processing, particularly where traditional laser cutting struggles with thermal effects, micro-cracking, or debris. By coupling a laser beam with a fine water jet, the technology enables cold, debris-free cutting with exceptional edge quality, making it highly valued in semiconductor dicing, sapphire and diamond processing, medical devices, and specialty aerospace components. Its adoption reflects a growing need for higher yields and finer geometries as device architectures shrink and materials become more brittle or expensive. Looking forward, broader diffusion will likely depend on cost reduction, system reliability, and expanding awareness beyond niche sectors. At the same time, competition from dry ultrafast lasers and hybrid machining means WJGL will remain a specialized but strategically important tool for applications where quality, yield, and minimal damage are critical differentiators.

The global Water Jet Guided Laser Technology market size was estimated at USD 95.12 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
