Abstracts

Water lubricated bearings are a specialized type of bearing system that utilizes water as the primary lubricant instead of traditional oils or greases, designed to operate effectively in submerged or water-exposed environments such as marine propulsion systems, pumps, hydropower turbines, and desalination plants, where they offer advantages including environmental compatibility by eliminating oil pollution risks, reduced operational costs due to the absence of lubricant purchase and disposal, and suitability for applications involving high speeds or where contamination from oil leakage is unacceptable.

The global Water Lubricated Bearing market size was estimated at USD 185.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.25% during the forecast period.
