## Abstracts

The water mist dust suppression system is a device that uses high pressure to break down water into tiny water droplets to form fine water mist for dust suppression. It mainly sprays fine water mist to increase the humidity on the surface of dust particles, causing the dust particles to coalesce into clusters and settle down, thereby achieving the purpose of dust suppression. The application fields of Water Mist Dust Suppression Systems will also continue to expand. At present, it has been widely used in mines, ports, docks, yards and other places. In the future, as technology advances and demand increases, water mist dust suppression systems can also be used in construction sites, factory workshops, public places and other places to further reduce dust pollution and improve air quality.
