## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Water and Ice Dispenser competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Water and Ice Dispenser production reached approximately 1,193.4 K units, with an average global market price of around US\$ 742.6 per unit. A Water and Ice Dispenser is a drinking device that combines water purification and ice-making functions. It primarily uses water purification technologies such as multi-stage filtration, reverse osmosis, or ultrafiltration to remove impurities, residual chlorine, heavy metals, and bacteria from the water, ensuring the purity and safety of the water source. The treated purified water is then used to make ice, resulting in transparent, hygienic, and better-tasting ice cubes. It typically also functions as a water dispenser, capable of providing iced water, cold water, or room-temperature water. It is widely used in homes, offices, restaurants, hotels, and other settings, meeting people's daily drinking water health needs while providing high-quality ice cubes and enhancing the drinking experience. Compared to traditional refrigerator ice makers or stand-alone ice makers, ice-making water purifiers offer significant advantages in terms of water quality safety, integrated equipment, and ease of use. The industry chain of water and ice dispensers is composed of upstream, midstream, and downstream segments that work together to deliver the final product to end users. Upstream, the chain involves the supply of raw materials and core components such as stainless steel, plastics, refrigeration compressors, filters, pumps, and electronic control systems, as well as technologies for water purification and ice-making. Midstream is centered on the design, assembly, and manufacturing of water and ice dispensers, where manufacturers integrate filtration systems, cooling units, storage bins, and dispensing mechanisms to produce various models suited for residential, commercial, and industrial applications. Downstream, the

products move through distributors, retailers, e-commerce platforms, and direct sales channels to reach households, offices, restaurants, hotels, hospitals, and convenience stores, with after-sales services and maintenance providers also forming an essential part of this stage. This complete value chain ensures not only the steady supply and quality of dispensers but also supports innovation, market accessibility, and long-term user satisfaction. The single-line production capacity of Water and Ice Dispenser is 105 to 113 K units per year, the average gross profit margin was 38.2%.

The global Water and Ice Dispenser market size was estimated at USD 886.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
