Report Overview:

Wastewater treatment is a process used to convert wastewater into an effluent (outflowing of water to a receiving body of water) that can be returned to the water cycle with minimal impact on the environment or directly reused. The latter is called water reclamation because treated wastewater can then be used for other purposes. The treatment process takes place in a wastewater treatment plant (WWTP), often referred to as a Water Resource Recovery Facility (WRRF) or a sewage treatment plant. Pollutants in municipal wastewater (households and small industries) are removed or broken down.

The Global Water and Wastewater Treatment Market Size was estimated at USD 5134.02 million in 2023 and is projected to reach USD 6311.03 million by 2029, exhibiting a CAGR of 3.50% during the forecast period.
