Abstracts

Water Pump Check Valve is an automatic valve that relies on the pressure generated by the flow of the medium itself and the weight of the valve disc to open and close, allowing the fluid to flow in one direction only. When the fluid flows in the predetermined direction, the valve disc opens; when the fluid flows back, the valve disc automatically closes, thereby cutting off the flow path and preventing damage caused by backflow. Pump check valves are widely used in various pipeline systems to protect the safety and stability of equipment and pipelines.

The global Water Pump Check Valve market size was estimated at USD 1213.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
