Abstracts

A water quality test pen is a handheld electronic device designed to measure key parameters of water purity and safety, most commonly total dissolved solids (TDS), electrical conductivity (EC), temperature, and sometimes pH, depending on the model. These portable instruments function by submerging a probe into a water sample and providing digital readouts of measured values, offering a quick, convenient, and user-friendly alternative to traditional laboratory testing methods. They are widely used across residential, commercial, agricultural, and industrial applications for purposes such as monitoring drinking water safety, checking aquarium conditions, evaluating hydroponic nutrient solutions, and assessing the performance of water filtration systems like reverse osmosis.
