Report Overview

Water-repellent cotton spunlace nonwoven fabric is a special functional material that combines the softness, breathability and water repellency of cotton spunlace nonwoven fabrics. Water-repellent cotton spunlace nonwoven fabrics are made of natural fiber pure cotton as the base material and processed by advanced spunlace technology. Pure cotton fiber has good moisture absorption and air permeability, and is mild and non-irritating to human skin. It is one of the ideal materials for making non-woven fabrics. In the production process, pure cotton fiber first undergoes pre-treatment steps such as cotton opening and loosening, and then is arranged into a net using a cutting-edge carding machine, a web laying machine, and a drafting machine. Subsequently, the high-density needle-shaped water columns formed after pressure are used to entangle the cotton fibers with each other through the action of a water spunlace machine to form a non-woven fabric with a certain strength and stability. In this process, the non-woven fabric is given water-repellent properties through specific process treatment.

The global Water Repellent Cotton Spunlace Nonwoven Fabric market size was estimated at USD 140 million in 2023 and is projected to reach USD 178.12 million by 2030, exhibiting a CAGR of 3.50% during the forecast period.
