Abstracts

Water soluble chitosan is a derivative of chitosan, a natural biopolymer obtained from chitin, primarily sourced from the shells of crustaceans such as shrimp and crabs, through a chemical modification process that enhances its solubility in water while retaining its beneficial properties such as biodegradability, biocompatibility, and antimicrobial activity; this modification typically involves processes like carboxymethylation, quaternization, or grafting, making it suitable for a wide range of applications including pharmaceuticals (e.g., drug delivery systems and wound dressings), agriculture (as a biopesticide or plant growth enhancer), food and beverages (as a preservative or functional ingredient), cosmetics (in skincare formulations for moisture retention and anti-aging effects), and water treatment (for flocculation and removal of contaminants).
