Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Water-soluble Defoaming Agent competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Water-soluble defoamers are defoaming agents that can be evenly dispersed or dissolved in aqueous systems. Typically composed of hydrophilic components such as polyethers, modified polysiloxanes, alcohols, or fatty acid salts, they exhibit excellent water dispersibility and compatibility, rapidly suppressing and eliminating foam in water-based systems without causing oil flotation or stratification. These defoamers are widely used in aqueous processes such as papermaking, water-based coatings, detergents, fermentation, water treatment, pesticide emulsions, and industrial cleaning. They offer advantages such as shear resistance, excellent stability, and low residue retention, making them particularly suitable for closed-loop systems and applications requiring high transparency and compatibility. In 2024, the global production of water-soluble defoaming agents will reach 3,204,760 tons, with an average selling price of US\$976 per ton.

The global Water-soluble Defoaming Agent market size was estimated at USD 3128.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
