Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Water-soluble VCI Powder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Water-soluble VCI Powder production reached approximately 61.8 kilotons with an average global market price of around US\$4,100 per ton. Water-soluble VCI Powder is a fine, dispersible substance engineered to dissolve readily in water, releasing volatile corrosion inhibitors that form a protective layer on metal surfaces upon contact. The water-soluble characteristic of this powder allows for an efficient and controlled dispersion within aqueous systems, ensuring that the corrosion inhibitors are evenly distributed to all exposed metal parts. Its primary intent is to safeguard metals from corrosion without the need for direct application, as the powder's solubility facilitates the formation of a protective atmosphere that envelops the metal, thereby preventing the electrochemical processes that lead to corrosion. This powder not only offers the convenience of a dry, easy-to-handle format but also ensures the integrity of the metal surfaces over time, reducing maintenance costs and extending the lifespan of the materials.

The global Water-soluble VCI Powder market size was estimated at USD 253.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
