Abstracts

Water Treatment ERP Software is an integrated management platform designed specifically for the water industry. Its core is to unify the entire business process of water plant operation, equipment maintenance, and financial control through a unified system. The system is structured around the water asset lifecycle, covering the entire value chain from raw water procurement, water production, pumping station distribution to customer service. It dynamically monitors key indicators such as chemical consumption, electricity consumption, and water production through real-time data collection from the SCADA system. Its unique value lies in establishing a refined accounting model based on the cost per ton of water, simultaneously integrating modules for pipeline inspection, leakage control, water quality testing, and meter management. It can automatically generate adaptive reports to meet industry regulatory requirements. By seamlessly integrating production and financial data, the system helps water companies optimize resource allocation, accurately collect operation and maintenance costs, and comprehensively analyze investment benefits, ultimately driving the transformation of traditional water management towards standardization, visualization, and scientific decision-making.
