## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Water Treatment Polymer Flocculant competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Water Treatment Polymer Flocculant is a type of water-soluble polymer made through artificial synthesis or modification of natural polymers. Its molecular chains are rich in active functional groups (such as amino, carboxyl, and hydroxyl groups). Through physical and chemical reactions such as adsorption and charge neutralization, bridging capture, and double-layer compression, it destabilizes and aggregates colloidal particles, suspended matter, microorganisms, and dissolved pollutants in water, forming flocculent sediments. This ultimately achieves efficient solid-liquid separation. These polymers are widely used in urban sewage treatment, industrial wastewater treatment (such as in printing and dyeing, papermaking, and mining), and drinking water purification. Global demand for water treatment polymer flocculants is steadily growing, driven by accelerating urbanization, strengthened water pollution control policies, and increased industrial water recycling. Regionally, the Asia-Pacific region, particularly China and India, is the world's largest consumer market, followed by North America and Europe. Demand for efficient water treatment solutions in these regions continues to rise for sectors such as municipal wastewater, papermaking, mining, power generation, and petrochemicals. Cations

Anions

Nonionics include anionic, cationic, and non-ionic, offering flexible options tailored to varying water qualities and application environments. Manufacturers are continuously upgrading their products to higher molecular weight, lower toxicity, and higher biodegradability to meet increasingly stringent environmental regulations and sustainable development goals. With growing global interest in green and

environmentally friendly products and increasingly stringent "zero-emission" requirements, the polymer flocculant market is expected to continue expanding, becoming an indispensable key material in the water treatment industry.

The global Water Treatment Polymer Flocculant market size was estimated at USD 4172.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
