Report Overview

A Water Vapor Transmission Rate (WVTR) tester, also known as a moisture vapor transmission rate tester or permeation tester, is a device used to measure the rate at which water vapor passes through a material. It is commonly used in industries such as packaging, textiles, pharmaceuticals, and electronics to evaluate the barrier properties of materials against moisture. WVTR testers are available in various configurations, including gravimetric methods, electrolytic sensor-based methods, and infrared sensor-based methods. Gravimetric methods involve weighing the test chamber periodically to measure the weight loss accurately. Electrolytic sensor-based methods use sensors that detect changes in electrical conductivity due to water vapor transmission. Infrared sensor-based methods utilize infrared sensors to measure the concentration of water vapor in the test chamber.
