Abstracts

Wood coatings are used in wooden furniture to achieve aesthetic properties and prevent mechanical, physical, and chemical damages. These are generally manufactured with a wide range of resins, namely acrylic, amino, polyester, polyurethane, and nitrocellulose and are classified into four types of coatings, namely solvent-borne, water-borne, radiation-cured, and powder-coated. According to the report, one of the major drivers for this market is Increasing availability of recycled wood. To prevent wood landfills and reduce waste, governments are imposing regulations to the limit of landfills. Europe imposed the Waste Framework Directive 2008/98EC to improve the recycling and use of resources. This regulation is aimed to meet the target of achieving 70% of recycling in construction and demolition, by 2020. It is estimated that approximately 5.1 million metric ton of wood waste is generated and 1.3 million metric ton of wood is being recovered every year in Europe. This increasing rate of wood recovery is expected to boost the global furniture wood coatings market.

The global Waterborne Wood Coatings market size was estimated at USD 2216.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
