Report Overview

Waterjet cutting is a manufacturing process that utilizes a high-pressure stream of water, often mixed with abrasive materials, to cut a wide range of materials, including metals, stone, glass, composites, and plastics. The technology is valued for its precision, versatility, and ability to cut without generating heat, minimizing material distortion and allowing for intricate designs. Waterjet cutters are used across industries such as aerospace, automotive, construction, and art fabrication, where high precision and minimal thermal impact are critical. The market has seen steady growth due to increasing demand for customized and complex parts, advancements in automation, and the rising adoption of environmentally friendly machining processes that reduce waste and energy consumption compared to traditional cutting methods like laser or plasma cutting.
