Report Overview:

TPO or thermoplastic polyolefin is a single-ply reflective roofing membrane. It is composed of polypropylene and ethylene-propylene rubber which are polymerized together to form what we call TPO. This synthetic roofing membrane comes in various thickness and dimensions. Usually, customers can find 45 to 80 mils thickness in the market. TPO is typically available in just three colors namely white, gray, and tan. If you want to achieve an energy efficient cool roof, you can go for the color white which effectively reflects the sun's energy. This also reduces the building's energy consumption as well as the urban heat island (UHI) effect.

The Global Waterproofing TPO Membrane Market Size was estimated at USD 2719.45 million in 2023 and is projected to reach USD 3728.41 million by 2029, exhibiting a CAGR of 5.40% during the forecast period.
