Abstracts

A watertight plug is a device used to stop the flow of water. Depending on the application, there are two types of plugs: ball plugs, which use air pressure to adhere to the pipe, and mechanical plugs, which do not use air pressure but are made to adhere to the pipe by expanding the diameter by hand-tightening the thumbscrews. The ball plug can be easily used by simply filling it with air. For this reason, they are often used when temporary water sealing is required, such as for cleaning inside sewage drainage pipes during post-disaster restoration work or for sewage drainage pipeline maintenance work.

The global Watertight Plug market size was estimated at USD 1830.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
