### Report Overview

Waterway Automatic Exhaust Valve is an automatic valve for exhausting air and gas. It is usually installed at the high point of the water pipe system or at the suction port of the water pump to ensure that the air and gas inside the water pipe system can be automatically discharged, so as to avoid the air and gas in the pipe from interfering with or hindering the water flow. The Waterway Automatic Exhaust Valve usually consists of a movable ball or valve that is pushed open when water flows through and air and gas are expelled. When the water flow stops, the ball or valve will automatically close, preventing the water from flowing back into the pipe.
