## Abstracts

The water hazard detection solution is a comprehensive safety monitoring system based on remote sensing, IoT sensing, unmanned inspection, and intelligent analysis technologies. It aims to provide real-time identification and early warning of structural risks, pollution hazards, and safety anomalies in water bodies such as rivers, lakes, reservoirs, and ports. This solution typically integrates water quality monitoring sensors, video AI recognition systems, unmanned surface vessels (USVs), and remote data platforms. It can automatically detect and dynamically analyze water pollution sources, drowning incidents, dam leaks, floating debris accumulation, and illegal discharge activities. Through cloud-based data fusion and risk model calculations, the system can promptly issue early warning signals and coordinate emergency response, providing efficient technical support and decision-making basis for flood control and disaster reduction, water ecological management, and public safety protection.
