Abstracts

A wave-making system refers to a setup or technology designed to generate artificial waves in controlled environments, such as wave pools, research facilities, or experimental tanks. This report mainly studies wave making system market, by type(pneumatic, vacuum and others), by application (wave pools, wave rivers, and others).Market drivers: In recent years, the Chinese government has attached great importance to the development of the cultural industry, tourism industry and sports industry, and has introduced a series of policies to support the construction of water entertainment facilities and encourage enterprises to develop and introduce advanced wave-making technologies. For example, the government provides tax incentives and R&D subsidies to high-tech enterprises to promote technological progress and industrial upgrading in the industry. In addition, the implementation of environmental protection policies has prompted enterprises to adopt energy-saving and environmentally friendly technologies, reduce energy consumption and pollutant emissions, and further promote the development of green wave-making systems. With the improvement of residents' consumption level, people's pursuit of high-quality life has promoted the rapid development of the water entertainment market. As the core facilities of water parks, resorts and other places, wave-making systems can provide immersive entertainment experiences and meet the diverse needs of consumers. Especially in coastal areas and first-tier cities, the popularity of water entertainment projects has provided a broad space for the wave-making system market. The wave-making system industry has made significant breakthroughs in technology, from the early mechanical wave-making to today's intelligent, automated and electrically controlled wave-making systems. The application of new wave-making technologies such as hydraulic and pneumatic wave-making technologies not only improves the realism and controllability of waves, but also reduces energy consumption and improves user experience.Market risks: The wave-making system industry has high technical content, and enterprises need to continue to

invest a lot of money in research and development and innovation. For small and medium-sized enterprises, technical barriers and research and development costs may become the main obstacles to market entry. As the market scale expands, domestic and foreign companies have entered the wave-making system industry, resulting in increasingly fierce market competition. Some companies are facing problems of overcapacity and product homogeneity, which may affect the overall profitability of the industry. The operation of the wave-making system consumes a lot of water resources and energy, while water resources are relatively scarce in some parts of China, which may limit the sustainable development of the industry. In addition, the tightening of environmental protection policies has put higher requirements on the technical level and operating costs of enterprises. The development of the wave-making system industry is closely related to the tourism industry, sports industry, etc., and macroeconomic fluctuations may affect consumer spending and investment willingness, which in turn has a negative impact on market demand.

The global Wave Making System market size was estimated at USD 3819.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
