Abstracts

A waveguide array antenna is a specialized type of antenna system that consists of multiple waveguide elements arranged in a specific geometric configuration to form an array, enabling precise control over the radiation pattern, beam steering, and signal gain through constructive and destructive interference. Unlike traditional antennas, it utilizes hollow metallic waveguides?often rectangular or circular?to guide electromagnetic waves with low loss and high power-handling capacity, making it particularly suited for high-frequency applications such as radar systems, satellite communications, 5G/6G base stations, and advanced wireless networks where performance, efficiency, and directional accuracy are critical. The design allows for electronic beamforming and scanning without moving parts, offering advantages in reliability, bandwidth, and adaptability to dynamic signal environments.

The global Waveguide Array Antenna market size was estimated at USD 450.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
