Abstracts

A weapons single carriage and release system is a specialized mechanism used in military aircraft or unmanned aerial vehicles (UAVs) to carry and release a single weapon, such as a missile, bomb, or other munition. This system securely holds the weapon during flight and releases it upon command, using mechanical, pneumatic, hydraulic, or pyrotechnic actuation methods. Unlike multi-carriage systems that can deploy multiple ordnance, a single carriage and release system is dedicated to managing one weapon at a time, providing increased control, precision, and often faster response times. These systems are essential for precise targeting and are commonly used in missions where specific, single ordnance deployment is required.

The global Weapons Single Carriage and Release Systems market size was estimated at USD 385.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
