Abstracts

Wearable bolus injectors are advanced medical devices designed for the subcutaneous delivery of on-demand, large-volume drug doses, typically ranging from 2mL to 10mL or more, over short periods. These compact, body-worn systems integrate precision mechanics, electronics, and connectivity features to enable patient-controlled or automated administration of biologics, high-viscosity therapeutics, and other drugs requiring bolus delivery?such as those for rheumatoid arthritis, multiple sclerosis, fertility treatments, and certain oncology applications. Unlike traditional infusion pumps, they prioritize discreet, single-use or limited-reuse functionality with intuitive interfaces, needle safety mechanisms, and often Bluetooth-enabled data tracking for adherence monitoring and dose history.

The global Wearable Bolus Injectors market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
