Abstracts

A wearable glucose biosensor is an advanced, non-invasive or minimally invasive device designed to continuously monitor glucose levels in the body in real time. These biosensors utilize biochemical and electrochemical sensing technologies to detect glucose concentrations in interstitial fluid, sweat, or other biological fluids without requiring frequent blood samples. Typically integrated into smartwatches, skin patches, or adhesive sensors, wearable glucose biosensors provide a convenient and user-friendly solution for diabetes management, enabling users to track fluctuations in blood sugar levels throughout the day. By transmitting data wirelessly to smartphones or other digital platforms, these devices allow for better glucose regulation, early detection of abnormal levels, and improved disease management. Their ability to provide continuous glucose monitoring (CGM) with minimal discomfort makes them an essential tool for diabetic patients, athletes, and health-conscious individuals seeking to optimize their metabolic health.

The global Wearable Glucose Biosensor market size was estimated at USD 424.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.
