Abstracts

Heart rate variability refers to the slight difference between successive cardiac cycles, reflecting the continuous instantaneous fluctuation of heart rate, and heart rate fluctuation is not accidental, but the regulation of internal nerves and body fluids, in order to adapt to different physiological conditions or certain pathological conditions inside and outside the body. In response to stress, HRV is a non-invasive indicator of the activity of the autonomic nervous system and its balance. The HRV of healthy people is large and complex, and the HRV of disease or stress is significantly lower. According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years.
