A wearable Holter recorder is a convenient medical device used to monitor the heart's electrical activity in real time and record an electrocardiogram. This device is usually designed as a wearable device, such as a bracelet, chest strap, or patch, which can continuously monitor heart health and help doctors and patients better understand their heart conditions. Wearable Holter recorders are widely used in the diagnosis, monitoring, and prevention of heart disease, especially for long-term heart health management in asymptomatic patients. Through wireless technology, the device can transmit ECG data to a smartphone or cloud platform in real time, so that patients and doctors can obtain information about the state of the heart in a timely manner.
