Abstracts

A wearable non-invasive blood glucose meter is a cutting-edge medical device designed to continuously monitor blood glucose levels without the need for traditional finger-prick blood samples. Unlike conventional glucose meters that require blood extraction, this device uses advanced sensor technologies such as optical spectroscopy, electromagnetic waves, or bioimpedance to detect glucose concentrations through the skin or interstitial fluid. These wearable devices are often integrated into smartwatches, patches, or armbands, allowing users—especially diabetic patients—to track their blood sugar levels in real time with minimal discomfort. By offering continuous, pain-free monitoring, wearable non-invasive glucose meters help improve diabetes management, enhance patient compliance, and provide valuable data insights for personalized healthcare interventions.

The global Wearable Non Invasive Blood Glucose Meter market size was estimated at USD 337.26 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.
