Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Wearable Physiology Logger competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Wearable Physiology Logger is a compact, body-worn device designed to continuously and non-invasively monitor, record, and store real-time data on physiological functions of the human body. These devices, which often take the form of wristbands, chest straps, skin patches, or headbands, integrate advanced sensors such as photoplethysmographs (PPG) for heart rate, accelerometers for movement, electrocardiogram (ECG) modules for cardiac activity, skin conductance sensors for stress levels, and temperature probes to capture metrics like heart rate variability, blood oxygen saturation, respiratory rate, and muscle activity. Unlike stationary clinical monitors, wearable physiology loggers prioritize portability, comfort, and long-term use, enabling data collection in natural, daily environments rather than controlled settings. They typically feature low-power technology to extend battery life, wireless connectivity (e.g., Bluetooth, Wi-Fi) for data synchronization with smartphones or cloud platforms, and user-friendly interfaces for easy access to recorded insights. Widely used in healthcare (for remote patient monitoring of chronic conditions), sports science (to optimize athletic performance), wellness tracking (for personal health management), and research (to study physiological responses to stress or activity), these loggers bridge the gap between real-time bodily function and actionable data, empowering users and professionals to make informed decisions about health, behavior, and performance.

The global Wearable Physiology Logger market size was estimated at USD 138.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

4.90% during the forecast period.
