Abstracts

Wearable pulse oximeters are compact, non-invasive medical or health-tracking devices designed to be worn continuously, typically on the wrist, finger, or earlobe, to monitor blood oxygen saturation (SpO₂) and often heart rate in real-time. These devices use optical sensors, such as photoplethysmography (PPG), to emit and detect light through the skin, measuring the absorption characteristics of oxygenated and deoxygenated hemoglobin to calculate oxygen levels. Primarily used for health monitoring by individuals with respiratory or cardiac conditions such as COPD, asthma, or sleep apnea as well as by athletes and fitness enthusiasts tracking performance and recovery, these wearables often integrate with smartphones or other digital platforms to provide data logging, trend analysis, and alerts. They bridge clinical-grade monitoring and consumer wellness, offering portability, ease of use, and proactive health insights outside traditional healthcare settings.

The global Wearable Pulse Oximeters market size was estimated at USD 1320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
