Abstracts

Web taxi sharing platforms are digital marketplaces that facilitate the pooling of passengers traveling along similar routes by connecting them with drivers through an app or website, enabling multiple riders to share a single vehicle and split the cost of the journey, thereby offering a more affordable and efficient alternative to traditional ride-hailing or private car services while optimizing vehicle occupancy and reducing urban traffic congestion and emissions. The market for these platforms has expanded rapidly, driven by urbanization, rising fuel costs, growing environmental awareness, and the demand for cost-effective mobility solutions, particularly in densely populated areas where traffic and public transport limitations are prevalent. Key players in this sector include established ride-hailing companies that have integrated carpooling features into their services, as well as specialized platforms focusing exclusively on shared rides, with competition intensifying around pricing algorithms, route optimization technology, user experience, and partnerships with public transit systems. Regional adoption varies significantly, with high growth observed in emerging economies where affordability is a major driver, while regulatory challenges related to safety standards, insurance, and data privacy continue to shape market dynamics and expansion strategies.

Technological advancements such as AI-driven matching systems, real-time tracking, and dynamic pricing are critical differentiators, while sustainability trends and corporate mobility programs present additional growth opportunities for providers that can demonstrate reliability, safety, and seamless integration with multimodal transport networks.

The global Web Taxi Sharing Platforms market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
