Report Overview

Web tension indicators measure and report tension parameters in web or other flat-sheet production processes. Some web tension indicators also provide rate control, basis weight control, and thickness control. Devices with totalizer, web alignment, and web breakage detection capabilities are also available. Web alignment refers to the placement of a sheet or web on the rollers. Sometimes, one edge is monitored and kept in the same relative place throughout the cycle. Products with breakage detection can sense a zero-tension (breakage) event and send signals or sound alarms to shut down the process. Web tension indicators with data logger and chart recorder capabilities are also available.
