Abstracts

The rise of web3 has also led to the demand for decentralized storage solutions allowing users to store, retrieve, and maintain their data. According to a new report published by Holon and Filecoin, web3 data storage could solve the global data storage crisis. The collaborative report from Holon and Filecoin states that the current centralized data storage model won't be able to handle future data demand. As per the report, global data generation grew to 79 ZB last year, up from just 2 ZB in 2010. Data generated by IoT, electrical vehicles, virtual and augmented reality, and 5G will increase the global data footprint by more than 300 times to meet future demand. The cost to reach a 3 ZB global data center footprint is estimated at more than US\$300 billion. The report stated that expanding this global footprint by more than 300x to meet future demands will likely cost US\$100 trillion. This is far too much to bear by existing cloud service providers. Decentralized data storage may be the answer to this. Web3 Storage refers to decentralized storage solutions designed specifically for the Web3 ecosystem, which includes blockchain-based applications, decentralized applications (DApps), NFTs, and other decentralized technologies. Web3 storage leverages blockchain and peer-to-peer (P2P) technologies to provide secure, censorship-resistant, and scalable storage options. Web3 storage is a critical component of the decentralized web, enabling secure, scalable, and censorship-resistant storage solutions for the next generation of internet applications.

The global Web3 Storage market size was estimated at USD 74.6 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.70% during the forecast period.
