Abstracts

The wedge-shaped paddle dryer is a drying device that uses hollow wedge-shaped paddles for efficient indirect heating. Steam, heat-conducting oil or hot water is introduced into the jacket and paddles to heat the material by conduction. At the same time, the rotating motion of the paddles continuously turns and stirs the material, improving the heat transfer efficiency and preventing agglomeration. Due to the use of low-speed stirring and indirect heating, the material is heated evenly, with less dust and low energy consumption. It is widely used in the drying process of the chemical, food, sludge treatment and pharmaceutical industries.

The global Wedge Blade Dryer market size was estimated at USD 389.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
