Abstracts

A weight loss weigh feeder is a specialized industrial device used in bulk material handling systems to precisely control and measure the rate at which material is discharged from a hopper or silo onto a conveyor belt, with the primary purpose of achieving a consistent, predetermined mass flow rate (e.g., tons per hour) by continuously monitoring the weight of material on a short section of belt and adjusting the belt speed or gate opening accordingly; this process, known as gravimetric feeding, ensures accurate proportioning of materials in processes such as cement production, mining, food processing, and chemical manufacturing, where even minor deviations in feed rates can impact product quality, operational efficiency, and cost control.

The global Weight Loss Weigh Feeder market size was estimated at USD 125.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
